

In order to bring coherence to an organisation the governing body sets priorities to ensure resilience and inform operational activities. Top management should align operational activities with these priorities and achieve coherence across the various management systems, to build resilience.

The organisation should consider supporting those systems with the following management standards:

Standard	Overview	Link
BS ISO 55000 Asset management -- Overview, principles and terminology	<p>ISO 55000:2014 provides an overview of asset management, its principles and terminology, and the expected benefits from adopting asset management.</p> <p>ISO 55000:2014 can be applied to all types of assets and by all types and sizes of organizations.</p>	https://www.iso.org/standard/55088.html
BS ISO 31000 Risk Management	<p>ISO 31000:2018, Risk management – Guidelines, provides principles, framework and a process for managing risk. It can be used by any organization regardless of its size, activity or sector.</p> <p>Using ISO 31000 can help organizations increase the likelihood of achieving objectives, improve the identification of opportunities and threats and effectively allocate and use resources for risk treatment.</p> <p>Read more...</p>	https://www.iso.org/iso-31000-risk-management.html

ISO/IEC 27001:2013 Information technology -- Security techniques -- Information security management systems -- Requirements	ISO/IEC 27001:2013 specifies the requirements for establishing, implementing, maintaining and continually improving an information security management system within the context of the organization. It also includes requirements for the assessment and treatment of information security risks tailored to the needs of the organization. The requirements set out in ISO/IEC 27001:2013 are generic and are intended to be applicable to all organizations, regardless of type, size or nature.	https://www.iso.org/standard/54534.html
BS 11200 Crisis Management		
ISO 28000:2007 Specification for security management systems for the supply chain	ISO 28000:2007 specifies the requirements for a security management system, including those aspects critical to security assurance of the supply chain. Security management is linked to many other aspects of business management. Aspects include all activities controlled or influenced by organizations that impact on supply chain security. These other aspects should be considered directly, where and when they have an impact on security management, including transporting these goods along the supply chain.
